

Backend Auth API

Authentication backend built with Node.js, Express, SQLite, JWT and bcrypt.

node.js 20.x express 4.x sqlite 3 jwt authentication license MIT

Overview

This project is a reusable backend authentication template focused on:

- secure authentication
- JWT authorization
- password hashing
- protected routes
- clean architecture
- scalable backend structure

The API is fully testable using Postman.

Tech Stack

Backend

- Node.js
- Express.js

Database

- SQLite3

Security

- JWT
- bcrypt
- helmet
- cors

Environment

- dotenv

Development

- nodemon

Features

- User registration
- User login
- JWT authentication
- Protected routes
- Bearer Token validation
- Password hashing
- SQLite persistence
- Middleware authentication
- Clean architecture

Architecture

```
Routes
  ↓
Controllers
  ↓
Models
  ↓
SQLite Database
```

Project Structure

```
src/
├─ config/
├─ controllers/
├─ database/
├─ middlewares/
├─ models/
├─ routes/
└─ utils/
```

Inatallation

```
npm install
```

Sí. De hecho un README premium en GitHub debería:

- verse limpio visualmente
- tener badges
- logos
- resumen rápido
- arquitectura
- features
- stack
- endpoints
- instalación
- roadmap

sin exponer:

- `.env`
- passwords
- rutas locales
- secretos
- datos privados

Te recomiendo algo mucho más profesional tipo:

```
Open Source Backend Template
```

Development

```
npm run dev
```

Production

```
npm start
```

API Endpoints

Register

POST /api/auth/register

Login

POST /api/auth/login

Profile

GET /api/auth/profile

Requires:

Authorization: Bearer TOKEN

Authentication Flow

```
Register
↓
Hash password
↓
Store user
↓
Login
↓
Generate JWT
↓
Access protected routes
```

Security

- bcrypt password hashing

- JWT stateless authentication
 - Helmet security headers
 - CORS enabled
 - Protected routes
-

Future Improvements

- Refresh tokens
 - Role permissions
 - Email verification
 - Password recovery
 - Rate limiting
 - Docker support
 - Automated testing
-

Project Goal

Build a professional and reusable authentication backend template using modern Node.js practices.
